

Programming Fundamentals Test 2: Data Types

- Full marks: 24 (3*8)

Try to use proper variable names. Add comments where necessary.

1. Declare and instantiate a list **manyNumbers** with the following data : **1 2 2 4 3 4 5 11 6 15 7 8 9**
 - Declare another list **justEven** and insert the even items in **manyNumbers** here.

Don't hardcode, use loops and conditions

2. Take the following data as input from user and store it in an array:
 - [<full_name>:string,<grade>:integer,<roll_no>:integer]
 - Concatenate Initials, Grade and Roll_no together to get a new string named **ExamRollNo** and display it.
 3. Declare and instantiate a list **arrayWithTwins** with the following data: **1 2 2 4 3 4 5 11 6 15 7 8 9**
 - Create a new list **twinlessArray** with just unique items from **arrayWithTwins**
-
